Thanks Group 21

That looks very good.

For the moment I cannot think of anything that is missing, but will consider and let you know if I do.

Best, and thank you for your work.

Sven

Subject: MVP Confirmation for Project Deliverable 1 – Fire Vulnerability App

Dear Prof. Sven,

We are currently working on Project Deliverable 1 (Project Specification and Plans Submission), which includes a Client Communication and MVP Agreement section where we need your agreement on the proposed Minimum Viable Product (MVP).

Based on our discussions and initial exploration, we propose that the MVP will include the following components:

- Interactive Map: Displays cultural heritage site locations and selected environmental layers (e.g., vegetation, fuel load, granite outcrops), with basic interactions such as zooming and location selection.
- Risk Assessment Module: Provides a simple, rule-based estimation of fire risk based on selected environmental factors (e.g., slope, vegetation proximity).
- Risk Visualization: Displays risk levels on the map using a colour scale (e.g., green for low risk, yellow for medium risk, red for high risk).
- Export Function: Allows users to export selected data as a CSV file (e.g., for use in Excel).

And we will focus on Wagyl Kaip Agreement Area in the Great Southern region of Western Australia, using publicly available datasets.

Please let us know if anything is missing from this MVP, or if there are any components you would like us to prioritise or adjust.

Thank you for your guidance and support.

Kind regards,
Cloud Wang
